Node.js Time Server on Ubuntu

This presentation will guide you on how to set up a Node.js time server on Ubuntu.

Set up environment

Enable NodeSource repository with 'curl -sL https://deb.nodesource.com/setu p_14.x | sudo -E bash -'

Install Node.js and npm with 'sudo apt-get update && sudo apt-get install -y nodejs'

Install Ubuntu VM

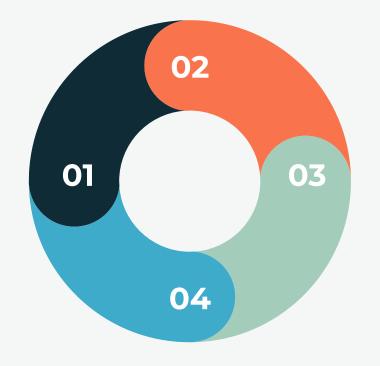

Check Ubuntu version using 'lsb_release -a'

Verify Node.js and npm installation with 'node --version' and 'npm --version'

Start the Node Time Server

Create a file named 'time_server.js' with the code provided

Open your Ubuntu terminal and run 'node time_server.js 8000'

Open your browser and go to 'http://localhost:8000'

You should see a page with the current time

Thank you for your time 😊
